

# Hex Movement

This is a new system we've devised which has not yet been playtested extensively. Though it does have strong roots in the rules.

Demon Idol uses a ~5-mile hex-based movement system similar to OD&D's usage of the Outdoor Survival map. This is a [BTB](#) movement system, since the rules suggest some variation in movement rate to suit the campaign.<sup>1)</sup>

## Movement Points

Each hex costs a number of MP (Movement Points) to move into. If sufficient MP are not available, the hex cannot be entered, period. There is no partial hex movement in this system.

MP are recovered daily. Any unused MP are lost.

Travel	MP/day
Foot (light burden)	6
Foot (avg. burden)	4
Foot (heavy burden)	2**
Mount (light)	12
Mount (medium)	8
Mount (heavy)	6
Mount (draft)	6
Cart*	5
Wagon*	5
Flying	Flying MV * 2/5, round to nearest

\* Possible only on road, pass, or open terrain.

\*\* A party moving at this speed which does not spend any MP in a day receives 3 MP instead of 2 MP the following day.

## Costs

Costs for entering a hex are as follows:

Terrain	MP Cost	Vehicles
LIGHT (Plain, scrub, light forest, low hills, desert)	1	Allowed on road or open terrain
ROAD through forest or swamp	1	Allowed
ROUGH (med. forest, steep hills, snow, rough ground)	2	Allowed on road or open terrain
PASS through mountains	2	Allowed

Terrain	MP Cost	Vehicles
HARSH (heavy forest, mountains, swamp, deep snow/ice, broken ground)	3 (1 hex/day only if mounted)	Prohibited
RIVER crossing (any hex w/ river lacking bridge or ford)	3 (1 hex/day only if mounted)	Prohibited
FLYING	1	–

## Reasoning

It is much more pleasant at the table to use this system, rather than counting out miles and tracking locations within a hex. As evidenced by OD&D's usage of the Outdoor Survival rules, such precision is not needed for the game.

Another major bonus is that it's much easier for players to picture this system. Using a mile-based system, it is more difficult for the players to picture the same thing the DM is picturing during the travel.

1)

DMG 58: "As the scale of maps will differ from campaign to campaign, general movement rates are given, and you can adapt them to the scale of your campaign maps accordingly. Some variation in movement rate is justifiable, but the distances shown should neither be increased or decreased substantially."
